

## **Carbon Net Zero 2040**

The circuit is committed to meet Carbon Net Zero targets by 2040 by installing equipment to provide renewable energy.

Three of our churches are part of a project that began in 2021. Those churches are Hedon, Patrington and Withernsea. Surveys have been carried out to advise on the best type of renewable energy for each church, such as solar, wind, ground or air source heat pumps etc.

Each church is currently following their own individual plans and progress will be updated as the programme moves forward.

For further information, please contact Circuit Project lead Geoff Langley.
